

To play:

1. Download CrossFire repository and unzip file.
2. The repository will appear as CrossFire-master at the location it is downloaded.
3. In a shell, change directory into CrossFire-master.
4. To compile use the command: `javac -d bin src/boardGame/*.java`
5. Change directory into the bin folder.
6. Run the program with the command: `java boardGame/CrossFire`

The goal is to get four pieces in a row, vertically or horizontally. Have fun! It's tougher than it looks.
